Director of EDF Business Solutions

All source certification meets GHG Protocol Scope 2 Guidance Quality Criteria. This document is for illustrative purposes only. Original Rego certificates assigned against your supply are held by energy suppliers for Fuel Mix Disclosure and will be available from 6 months after the latest compliance period has closed. The zero-carbon electricity that we buy for Zero Carbon or Renewable tariffs and product is supplied into the National Grid. Customers receive that electricity through the National Grid, not directly from zero carbon generators.

The Carbon Trust footprint licence is for EDF only. Therefore, EDF customers can display the certificate with the verified logo in their offices, but cannot use in any external marketing materials.
*100% of the electricity supplied is renewable, backed by certificates of renewable energy guarantees of origin. The emission factor conforms with the GHG Protocol Scope 2 guidance and may be used for the 'market-based' method.
